

Seabrook, N.H.

July 14 - '77

Mr. Geo. E. Davenport.

Dear Sir:

Yours re-  
questing specimen of Camoena  
at hand. Unfortunately I had  
distributed all duplicates as  
Californica before I learned its  
status. I send two fronds, one  
which has been glued down,  
grown from a root sent east, the  
other shut up in a book at Deer  
Park, the type locality. This ex-  
hausts all but what I have glued  
down. I shall send to the locality  
to see if anyone can find it, and  
I am in hopes they can, as I have  
received a root of it since I re-

hatched, but it did not live.

If successful I will send  
you a good specimen. At  
that time it will be time enough  
to talk of return: there are many  
desired, especially Pelleas & Chit  
anthes f.c. from the Southwest.

Very sincerely

Alvah C. Eator
